DETAILED ACTION

This office is in response to remarks and amendments filed September 9, 2010. Claims 2, 4-13, 15-17, 22, 24, 25, 29, 31-40, 42-44, 49, 51, 52, 56, 58-67, 69-71, 76, 78, and 79 are pending.

Drawings

The drawings submitted on November 14, 2003 are acceptable.

Response to Arguments

Applicant's arguments filed on September 9, 2010 have been fully considered and previous rejection has been withdrawn.

Allowable Subject Matter

Claims 2, 4-13, 15-17, 22, 24, 25, 29, 31-40, 42-44, 49, 51, 52, 56, 58-67, 69-71, 76, 78, and 79 are allowed over prior arts.

The above mentioned claims are allowable over prior arts because the CPA (Cited Prior Art) of record fails to teach or render obvious the claimed limitations in combination with the specific added limitations, as recited in independent claims and subsequent dependent claims.

The following is an examiner's statement of reasons for allowance:

The present invention is directed to system and method of security threat reduction that involves reducing probability of random collision by supplementing identification field of internet protocol header *with at least one bit* from another field of end point header.

The system and method involves security communication over a plurality of network where the probability of random collision is reduced by supplementing the identification field of internet protocol (IP) header with at least one bit from another field of end point (EP) header thus the security threat in connection with the transmission of IP datagram is reduced. In this system the probability of success of denial-of-service (DOS) attack is reduced on a node receiving packets by decreasing the probability of random collision of packets sent by the malicious user.

Thus, the cited prior art does not explicitly teach or suggest a method formatting an IP datagram having an IP header containing an identification field comprising:

determining, in the computing device, identification information having a length greater than 16 bits associated with data to be sent in the IP datagram;

inserting, in the computing device, at least one bit of the identification information into the identification field of the header;

inserting, in the computing device, remaining bits of the identification information into at least one other field of the header; and

transmitting, from the computing device, the IP datagram.

The examiner has found that the prior art of record does not appear to teach or suggest or render obvious the claimed limitations in combination with the specific added limitations as

recited in independent claims and subsequent dependent claims. The prior art of record fails to teach or suggest a system and method as mentioned above.

An updated search did not reveal any prior art that would anticipate or make obvious the currently claimed invention.

1. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SYED ZIA whose telephone number is (571)272-3798. The examiner can normally be reached on 9:00 to 5:00.
